

Since 1959, Nu-Hope Laboratories has provided personalized customer service to Ostomates, their nurses, caregivers and families. Our ostomy products are designed and manufactured in the USA. We help WOC nurses, doctors and caregivers to find the perfect solution for all patients. Our product range includes support belts, ostomy pouches and accessories. We offer custom solutions for support belts and pouches.

Our brief history: In 1959, Nu-Hope Laboratories was founded by Edmund Galindo after he created his own ostomy devices that allowed him to get back to work and back on the golf course. The Nu-Hope name comes from Ed's wife's name, Hope, and the feeling that they were offering "new hope" to others in need. Today, the family legacy lives on, as the Galindo family continues to help ostomates and their families live better, happier and healthier lives.
